

MUHAMMAD RIAZ

Full Stack Developer (MERN)

DHA Phase 2 - Sector E, Islamabad, Pakistan

📞 +92-331-9876376 ✉️ riazdev18@gmail.com [in Muhammad Riaz](#) [GitHub Muhammad Riaz](#)

Full Stack Developer specializing in the MERN stack and Next.js, with production experience building real-time and AI-integrated applications. Background in ASP.NET Core; Azure-certified.

Education

Sarhad University of Science and Information Technology

Bachelor of Science in Software Engineering - CGPA (3.8/4.0)

2021 – 2025

Peshawar, Pakistan

Technical Skills

Languages: JavaScript, TypeScript, C#, SQL, C++

Frontend: React.js, Next.js, Redux, Tailwind CSS, Bootstrap, HTML5/CSS3

Backend: Node.js, Express.js, ASP.NET Core, Entity Framework Core

Databases & Testing: MongoDB, Mongoose, SQL Server, PostgreSQL, Jest, Vitest

Tools & Cloud: Git, Docker, Postman, Microsoft Azure, CI/CD, Cursor, Claude code Agile/Scrum

Professional Experience

Softech Business Services (SMC-PVT) Limited

Software Engineer – Full-time (Onsite)

2025 – Present

Islamabad, Pakistan

Intli Hub: Real-Time Speech Translation App | *React.js, Vite, Node.js, WebSocket, JWT*

- Engineered the React/Vite frontend for a real-time multilingual speech translation platform, delivering three modes (Solo, Room, Conference) that stream audio over WebSocket with live transcripts and TTS playback.
- Strengthened real-time reliability with WebSocket heartbeat/resync, JWT and guest authentication, and disconnect handling, reducing session drops in multi-user calls.

Intelli Search: RAG-Based E-commerce Search Engine | *Python, FastAPI, React.js, Elasticsearch*

- Architected a multilingual (50+ languages) semantic search platform, applying vector embeddings and NLP-based intent matching to return typo-tolerant results in under 200ms.
- Designed a microservices architecture with a FastAPI backend and React frontend, using Elasticsearch/Pinecone for vector search and Redis caching.

E-Bazaar: Frontend Revamp | *React.js, REST APIs*

- Modernized the E-Bazaar UI by refactoring legacy state management into a cleaner React architecture, improving responsiveness and UI consistency platform-wide.

Projects

Examify: Online Examination System | *ASP.NET Core, SQL Server, React.js, Dialogflow*

GitHub

- Designed a comprehensive examination platform with role-based authentication, question bank management, and an AI-powered Dialogflow chatbot for real-time student support.
- Delivered a responsive React.js frontend with automated grading, streamlining the end-to-end exam workflow.

CineFilly: Movie & TV Discovery Platform | *Next.js, React, TypeScript, Tailwind CSS*

GitHub

- Built a full-stack movie, TV, and music discovery app using Next.js App Router with Server Components, ISR, and SSR, optimizing pages for speed and SEO.
- Secured TMDB/YouTube API integrations behind server-side proxy routes with rate limiting; backed by a 45+ test Vitest suite.

TickVento: Full-Stack Event Ticketing Platform | *ASP.NET Core 8, Next.js 16, MediatR, Docker*

GitHub

- Built a full-stack ticketing platform: an ASP.NET Core 8 API with Clean Architecture, DDD, and CQRS via MediatR, paired with a Next.js 16 frontend using TanStack Query.
- Secured the platform with JWT refresh-token auth, an admin dashboard for booking/revenue reporting, and a Dockerized CI pipeline with automated tests.

Achievements & Certifications

- Earned the AZ-104 Azure Administrator Associate certification, validating hands-on expertise in cloud infrastructure management.
- Transitioned primary tech stack from ASP.NET to MERN/Next.js within months, independently shipping three full-stack projects.
